

MNEMOTOAD

Remember what you've yet to compose.

Quick reference, version 0.2.1
Open from the command palette:
`MNEMOTOAD: Open PATCHBOOK`
`MNEMOTOAD: Open MOTIF`
`MNEMOTOAD: Open CANVAS`

1 Keep the sound

PATCHBOOK: Instruments, then **New record** and **Save record**. Add a patch and choose its instrument.

2 Write the phrase

MOTIF: **New motif**. Link a patch under **PATCHBOOK context**, draw notes, **Play motif**, **Save motif**.

3 Arrange the piece

CANVAS: **New composition**, **Add lane**, **Place motif** with repetitions, then **Compile** and **Play arrangement**.

4 Take it to your DAW

Export MIDI from MOTIF or **Export arrangement MIDI** from CANVAS. Each export is a new file in your vault.

MOTIF with the editor focused

Click empty grid	Draw a note
Drag note / right edge	Move / resize
`Shift` **click**	Add to the selection
`Shift` **wheel**	Scroll through time
`Ctrl` **wheel**	Zoom
`←` `→`	Nudge one grid step
`↑` `↓`	Nudge one semitone
`Ctrl/⌘` + `A`	Select every note
`Delete`	Remove selected notes
`Esc`	Clear the selection
`Ctrl/⌘` + `Z`	Undo
`Ctrl/⌘` + `Y`	Redo (or Ctrl/⌘ Shift Z)
`Ctrl/⌘` + `S`	Save motif

Nudging works with the roll focused; elsewhere in the editor the arrow keys step between notes. The note inspector edits position, pitch, duration and velocity exactly.

CANVAS timeline or clip focused

`←` `→`	Move one grid step
`Ctrl/⌘` + `D`	Duplicate the clip
`Delete`	Delete the clip
`[` `]`	Previous / next section
`,` `.`	Previous / next marker
`Esc`	Clear the selection
`Ctrl/⌘` + `Z`	Undo
`Ctrl/⌘` + `Y`	Redo (or Ctrl/⌘ Shift Z)
`Ctrl/⌘` + `S`	Save composition

Select a clip to set its exact bar:beat:tick position, repetitions and lane. Sections and markers organise the timeline; they never change the MIDI.

Good to know

Source review required

A saved motif changed. Choose **Review changed sources**, acknowledge, then compile again. Arrangements never change silently.

Saving is protected

If a note changed elsewhere, Save is blocked and your edits stay open. In PATCHBOOK, `Ctrl/⌘` + `S` saves the record you are editing.

Recovery register

Drafts and pre-save backups live in **MNEMOBARD/Recovery**. Inspecting writes nothing; loading asks first and saves nothing.

MIDI

Notes with one tempo and meter. Compositions use 960 PPQ. Imports up to 2 MiB. In REAPER, tick **Expand MIDI tracks** and **Import MIDI tempo map**.

Audition

Plain sine tones for checking ideas. No plugins are hosted and no audio is rendered.

Records are Markdown notes in your vault, under **MNEMOBARD/**.
